The Drunken Barrels is a rotating round ride composed of a base frame of steel sections upon which a large revolving platform is built. The main platform revolves up to 6 rpm. Built into the large platform are three smaller platforms, which turn at the same speed. On each of the smaller platforms are 4–6 barrels seating 6 passengers each. The barrels can also be rotated by the passengers with a hand wheel in the center of the vehicle. The whole complex, the base platform and the three smaller platforms with the barrels, is tilted up to an angle of 15 degrees or approx. 3,7m by means of two hydraulic cylinders. Each one is capable of holding the full load. The speed of the platforms is adjustable. With these features, different and very exciting ride effects can be obtained.

Technical Data

Drunken Barrels

Required space, diameter	18 m
Diameter of the main platform	13 m
Max. angle of inclination	15°
Number of barrels	up to 18
Capacity per barrel	6
Hourly capacity	up to 2160 pph
