The Family Coaster as its name suggests, is a family-type coaster equally enjoyable for adults and children. This ride is the next generation of Intamin's famous Mine Train.

The ride system consists of a train travelling along the steel track. Before the beginning of its journey, the train is conveyed up the lift by friction wheel drives, chosen to reduce the noise to a minimal level – as noise emission is a common issue in most parks. The anti-roll back system is also working with a reduced noise level, meaning without the well-known "click-click", sound of the ratchet system. The newest standards and latest technology allow Intamin's train to travel on noise-reduced wheels during its run at various speed, determined by gravity - up to 70 km/h, to keep the family friendly thrill.

From the top of the lift at approximately 20 meters above the ground, the train passes through exciting drops and hills, speedy curves and highly banked carousel before entering the brake zone leading back into the station. Layouts can be adapted according to park's specifications considering the space and budget available.

Intamin's knowhow leads to satisfy the entire family, even the youngest thrill seekers, allowing them to enjoy a nice and smooth roller coaster by keeping the track low on the ground combined with controlled G-forces.

**Technical Data**

**Family Coaster**

<b>Length of track</b>	up to 600 m (longer upon request)
<b>Max. speed</b>	up to 70 km/h (faster upon request)
<b>Capacity per train</b>	up to 20
<b>Hourly capacity</b>	up to 900 pph (higher upon request)
<b>Total height</b>	up to 20 m (higher upon request)
