

Tow Boat Ride

The flexible family ride

INTAMIN
AMUSEMENT RIDES

The Tow Boat Ride is an attractive and relaxing boat ride constructed around an existing or man-made body of water. The attachment to the main drive cable gives the boats limited freedom of movement, creating the impression of free-floating boats. The installation operates without noise because of its drive system and is environmental friendly. A few below the surface of the water is a steel wire rope, suspended by underwater deflection pulleys located at each desired turn. The Tow Boat Ride is an efficient and attractive amusement and transportation facility. Layouts are flexible according park's requirements and needs.
